

Draffin Decal Guide

Ver 3.5 - 4/04/22

Draffin's range of decals are made from a self-adhesive vinyl suitable for signage applications. All Draffin's decals have an over-laminate layer that has a high level of weather and abrasion resistance and is UV stable to prevent colour fading.

Step 1: Select the Decal.

Pick and choose from the standard decal range, or speak to our friendly sales team about incorporating your own decal designs.

Alternatively, work with our design specialist to create custom artwork specific to your project.

Step 2: Select the Decal Size.

Draffin's standard range of decals come in A4 or A3 sizes. The artwork can be scaled up or down in size to suit your application, just let our friendly sales team know the size you require.

Step 3: Select Decal Placement.

Decals can be placed on 1, 2, 3, or 4 sides of the bin and on most bin covers. We recommend that the decal is placed in the centre of the panel, unless an alternate position is specified.

Decals: Custom & Vinyl Wrap

Custom Decals

All Draffin's decals are constructed from high grade materials that are fully weather resistant and UV stable. Custom decals can be incorporated into the make of your bins. Work alongside our design specialist to develop a concept with graphics, text and colours specifically suited to your waste strategy.

Vinyl Wrap

Draffin's vinyl wraps are made from a high performance vinyl developed specifically for applying high resolution graphics to flat surfaces. Suitable for long-term applications, this extremely durable vinyl is low maintenance, protects against abrasion and can be easily updated with your latest waste strategy or marketing campaign.

Laser cut logos can be used on bin enclosures to integrate corporate branding or communicate waste strategies. To ensure an accurate representation of your logo, vector graphic files are preferred. This allows the image to be upscaled without losing image quality. i.e. *If your logo pixelates when zoomed in, this is not a vector.*

Optional backing plates in contrast colours are available to enhance the look of your logo.

Step 1: Provide us with your logo.

Our engineers will modify your logo for laser cutting. This ensures once laser cut, the surface space of the bin will be strong enough to support the design.

Step 2: Specify the Logo Size and Backing Plate

You can use paper size as a guide (eg. A3, A4, A5), or specify an exact measurement.

Material options for backing plates include **stainless steel**, **weathering steel**, **powder coated steel** or **recycled plastic**.

Step 3: Select Logo Placement.

Logos can be placed on 1, 2, 3, or 4 sides of the bin and on most bin covers. We recommend that the logo is placed in the centre of the panel, unless an alternate position is specified.
