

900 Series Recycled Plastic Panel Routed Patterns

Draffin Street Furniture's standard 900 series Bin Surround frames are clad with 65mm x 19mm battens. However, for further styling choice you can choose 19mm thick Recycled Plastic HDPE panels made from 100% post-industrial polymers. This hardy material is totally waterproof and resistant to most chemicals and UV light, wont rot, split or crack and therefore requires little to no maintenance. The material is available in 10 bright colours.

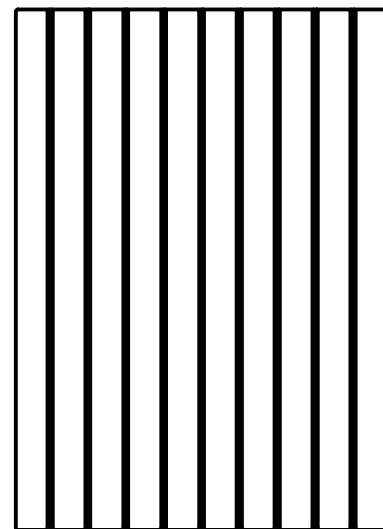

For further styling choice on HDPE panels, there are routed pattern options that can enhance the appearance of the bin surround if required. Below are Draffin Street Furniture's current standard patterns that can be selected when choosing HDPE panels.
